RICHARED
The DELICIOUS
The DELICIOUS supreme

Golden Jubilee

Developed and introduced by the New Jersey Experimental Station—A high quality, Early, Yellow, Freestone Peach beyond every expectation.

This is an exact reproduction of the GOLDEN JUBILEE Peach in size, color, texture, and general appearance. The peaches from which this reproduction was made were picked from second generation trees at Westville, N. J. July 31, 1929. The merits of this Peach can be readily realized by every fruit grower. The peach stands apparently without a weakness.

The GOLDEN JUBILEE peach is a second generation seedling of the Elberta crossed with the Greensboro. The tree is very hardy; the foliage more resistant to disease than the average. The blossoms open after Elberta and are very hardy. The peach is a yellow skin and yellow fleshed peach being highly and attractively colored; it is a perfect free stone. Has a self fertile blossom; is a prolific bearer, ripening from 3 to 5 days before Carman or about 3 weeks before Elberta. It will carry well to market and compare favorable with Elberta on any market regardless of season.

We have some fine trees of these for this fall and next spring, but do not think there will be enough to go around so order now to be sure of getting yours.

THE NEW... THE OLD

AN ECHO FROM THE GREAT DELICIOUS APPLE SECTION OF THE NORTHWEST

WILL ENTIRELY REPLACE PLANTING OF COMMON DELICIOUS

R. EDWARD TRUMBLE
Consulting Horticulturist

Wenatchee, Washington.

I have seen and observed your new strain of Delicious, the “RICHARED,” both on the original parent tree and also the apples on the young trees, and in my opinion you have the most beautiful apple in the world. It is certainly marvelous to see these—full blood red color in August, while Delicious on adjoining trees are still green. This added color with advantages of earlier picking, earlier marketing, firmer apples, more extra fancies, no loss from “Windfalls,” and better keeping qualities, convinces me that in the “RICHARED” Delicious you have an apple worth millions of dollars to the apple industry of the world.

I have seen and tasted your “Richared” Delicious which the records at the cold storage plant showed were kept in cold storage for three seasons—apples picked in 1925 and still firm, crisp and juicy in September, 1927, two years later.

I have no hesitancy in stating that in my opinion the “Richared” Delicious will entirely replace plantings of common Delicious and that it is a better apple from every standpoint.

R. EDWARD TRUMBLE

A BLAZING EXAMPLE OF ONE OF NATURE’S CONTRIBUTIONS TO PROGRESS

A Blood Red Bud Mutation of the Famous Delicious Apple That Promises to Revolutionize the Growing of Delicious Apples

You need no longer marvel in doubt. It is here. That Real Delicious Apple that colors a full bright red, without a stripe on every part of the tree weeks before time to pick the fruit. The apple that every man who grows Delicious apples has dreamed of and hoped for. The significance of this Phenomenal freak of nature is hard to realize. It will mean millions of dollars to the fruit growers of this great country. No orchardists can overlook these facts about this new apple, the RICHARED DELICIOUS. A tree of the same hardy characteristics as the old Delicious, producing an apple with that same appetizing, delicious flavor, producing an apple that colors a full bright red without a trace of stripe on every part of the tree, the apple attaining this color weeks before we usually make it one of the most profitable apples for the fruit grower.
